

PRADYUN GAYAKWAD

Software Engineer — RPA & Automation | AI & ML | DevOps & CI/CD | Embedded Systems

Pune, India | +91 95117 09377 | pradyungayakwad@gmail.com | linkedin.com/in/pradyun-gayakwad | github.com/Pglol03

PROFESSIONAL SUMMARY

Software engineer with a B.Tech in Artificial Intelligence and Data Science (CGPA 8.95) working across Robotic Process Automation, applied AI/ML, DevOps, and embedded firmware. Currently maintain 36 production UiPath automations and pioneered the team's first AI-assisted, API-first (headless) automations; previously migrated enterprise CI/CD at Seagate and shipped UAV firmware. Holds a published AI patent and two research papers (YOLO computer vision, robotics).

TECHNICAL SKILLS

Languages: Python, C++, C, Java, SQL

AI & ML: Machine learning classification models, computer vision (YOLOv3/YOLOv4), AI-assisted development (Cursor / LLM tooling), Google Assistant API, data preprocessing, sensor data pipelines

RPA & Automation: UiPath (Studio, Orchestrator, RE Framework), API-first / headless automation, OCR / document automation, process design documentation

Cloud & DevOps: AWS (EC2, S3), Microsoft Azure (Blob Storage), Docker, Jenkins, GitLab CI/CD, Git, Linux, Windows Server / Remote Desktop

Embedded & IoT: Raspberry Pi, ESP32, ChibiOS RTOS, MAVLink 2, schematic capture and PCB layout

WORK EXPERIENCE

RPA Developer (Trainee) — Radamatic (A Cive Company), Pune | Aug 2025 – Present

- Develop and maintain a portfolio of **36 production UiPath automations** (9 built on RE Framework) spanning banking applications, insurance claims processing, data entry, remote desktop applications, and OCR-based workflows.
- Built end-to-end automations for report generation and download, SQL database entry, and Azure Blob Storage uploads, removing recurring manual effort for business teams.
- **First on the team to implement headless automation:** replaced slow, unreliable UI interactions with direct API calls extracted via tooling built with Cursor (AI-assisted), cutting run times from ~20 minutes to 1–2 minutes (**~90% faster**) across 3 automations.
- Refactored legacy processes to current coding standards and authored process documentation now used as the team's standard reference.

Software Engineering Intern — Seagate Technology, Pune | Feb 2025 – Jun 2025

- Migrated the team's CI/CD pipeline from Jenkins to GitLab CI and added automated versioning and logging for release builds, covering both Windows and Linux binary installers.
- Designed a custom board for drive-testing workstations end to end: hardware selection, schematic design, PCB layout, and firmware development.

Embedded Systems Intern — Vetaal Defence | Dec 2024 – Feb 2025

- Implemented UAV telemetry using MAVLink 2 packets and commands, with a dashboard and control panel operated through a simulated Ground Control Station interface.

Firmware Engineer (Part-time) — Aman Momin Innovations (AMI) | Feb 2024 – Jun 2025

- Integrated open-source ChibiOS-based firmware with UAV subsystems, enabling directed and autonomous control of single and multi-vehicle configurations.

Cloud Engineering Intern — Quizaro ExtendedEdge | Dec 2023 – Feb 2024

- Managed AWS S3 website infrastructure with versioned updates and verified rollbacks, and deployed two EC2 web servers with minimal-downtime installations.

PROJECTS

Personal Pet Robot — Python, Raspberry Pi, Google Assistant API

- Built a Raspberry Pi 4 voice-interactive robot performing **15 physical actions** (including animated facial expressions) that answers user queries with live data in **under 3 seconds**; work published at ICMCER-2023.

Crop Recommendation System — Python, C++, ESP32, Machine Learning

- Developed an IoT + web system that reads **8 soil and environmental parameters** from in-field sensors and recommends the best of **18 crops** in real time using ML classification with **97% prediction accuracy**.

PUBLICATIONS & PATENT

- **Patent (Published 2023):** "SlideAI – Automatic Presentation Maker", Intellectual Property India, Journal 41/2023 Part 2, p. 70351.
- **Paper:** "Design and Implementation of a Raspberry-Pi Based Personal Pet Robot" — ICMCER-2023 (4th International Conference, Thailand, hybrid).
- **Paper:** "Object Detection Using YOLOv3 and YOLOv4 in Android" — ICFMRS-2022.

EDUCATION & CERTIFICATIONS

B.Tech, Artificial Intelligence and Data Science — Vishwakarma Institute of Technology, Pune (Savitribai Phule Pune University) | 2021 – 2025 | CGPA: 8.95 / 10

UiPath: Automation Developer Professional Training (v2023.10) · Automation Developer Associate Training — ID 160345649, valid to 2027
